PCA

Principal component analysis plots using feature expression levels. PCA is particularly good for QC purposes.

Points can be coloured either by cell metadata variables (see drop-down menus for shape_by and size_by for options) or feature expression levels, just enter a valid name into the text box below.

colour_by (either cell metadata or feature expression):

shape_by:

size_by:

exprs_values:

number of most variable features to use:

number of components:
